Please read and understand these instructions before starting work. Please leave this leaflet with the user following installation.

PACK CONTENTS
Heater, Spout assembly, Fixing screws and plugs, Torx adjusting tool, Installation and User Instructions.

WARNING
This Instantaneous Hand Wash must only be installed by qualified persons.
36006007 Issue 4.
Thank you for purchasing a Santon EV2008 Hand wash. The Hand wash instantaneous water heater is manufactured to the highest standards and has been designed to meet all the latest relevant safety specifications.

This Hand wash instantaneous water heater must be installed (Sections 4.0-7.0), commissioned (Section 7.0) and maintained (Sections 8.0 - 9.0) by a competent person. Please read and understand these instructions prior to installing your Hand wash instantaneous water heater. Particular attention should be paid to the section headed SAFETY (section 2.0). Following installation and commissioning the operation of the heater should be explained to the user (Section 7.0) and these instructions left with them for future reference.

This appliance can be used by children aged from 8 years and above and persons with reduced physical sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved. Children shall not play with the appliance. Cleaning and user maintenance shall not be made by children without supervision. Children must be supervised to ensure they do not play with the appliance.

TECHNICAL SPECIFICATION

CONNECTIONS
Inlet connection -15mm ext. diameter (copper or push fit stem elbow)
Water entry point - bottom and rear
Cable entry point - bottom and rear

ELECTRICAL
Model numbers
3.1kW - Hand wash - 94 020 017
Electrical rating..........................................................2.9/3.1kW @ 230/240V
Ampre rating..............................................................2.9/3.1kW @12.4/12.9A

MATERIALS
Backplate, cover and control knob- ABS
Element(s) - Copper sheathed rod type.

DIMENSIONS
Height - 235mm
Width - 151mm
Depth - 85mm

STANDARDS AND APPROVALS
Complies with the requirement of EN 60335-2-35.
Complies with European Community Directives (CE).
Complies with uk water regulations, kiwa approved.
1.0 INTERNAL COMPONENTS

1.1 A pressure relief device (PRD) is designed into the hand wash appliance, which complies with European standards. The PRD provides a level of appliance protection should an excessive build-up of pressure occur within the appliance.

1.2 DO NOT operate the hand wash with a damaged spout or blocked sprayplate, which can cause the PRD to operate.

Figure 1 Internal components - 3.1kW

2.0 SAFETY

IMPORTANT INFORMATION

2.1 Products manufactured by Santon are to British and European Standards. These appliances are safe and without risk, provided they are installed, used and maintained in good working order in accordance with our instructions and recommendations.

2.2 Please read and understand these instructions before starting work and retain them for later use.

2.3 DO NOT operate the appliance if it is frozen, or suspected of being frozen. See fault finding table.
2.4 DO NOT operate the appliance if:
1. Water ceases to flow during use.
2. Water has entered inside the unit because of an incorrectly fitted cover.
3. If the appliance is damaged.

2.5 ISOLATE the electrical and water supplies before removing the cover.

2.6 ISOLATE the electrical and water supplies BEFORE proceeding with installation or servicing.

2.7 The appliance must be mounted on to a flat finished wall surface that covers the full width and length of the backplate (or on top of the tiles).

2.8 DO NOT tile up to the appliance after fixing to the wall.

2.9 The sprayplate must be cleaned when any of its holes become blocked, otherwise restriction to the flow from the outlet spout will result in higher temperatures and could also cause the pressure relief device in the appliance to operate - see 1.1 and 9.2.

2.10 The product is NOT SUITABLE for mounting into steam rooms or steam cubicles.

2.11 The installation must be carried out in accordance with the relevant requirements of:
• The appropriate Building Regulations either The Building Regulations, The Building Regulations (Scotland) or Building Regulations (Northern Ireland).
• The Water Fittings Regulations or Water Byelaws in Scotland.

CAUTION

2.12 It is recommended that persons who may have difficulty understanding or operating the controls should not be left unattended whilst washing hands. Special consideration should be given to young children and persons with reduced physical, sensory or mental capabilities.

2.13 Only use designated entry points for cable and pipe.

PLUMBING

2.14 The plumbing installation must comply with Water Regulations.

2.15 The supply pipe must be flushed to clear debris before connecting to the hand wash appliance.

2.16 DO NOT solder pipes or fittings within 300mm once the pipework is located in the appliance, as heat transfer can damage components.

2.17 DO NOT fit any form of outlet flow control, as the outlet acts as a vent for the heater can.

2.18 DO NOT use excessive force when fitting the spout fixing nut, finger tightness is sufficient.

2.19 All plumbing connections must be completed and checked for leaks before making the electrical connections.
2.20 Before fitting the appliance, ensure that the consumer unit and any switches are suitable for the additional load. If in doubt, contact your electricity supplier or a qualified electrician.

2.21 The installation must comply with BS 7671 ‘Requirements for electrical installations’ (IEE Wiring Regulations).

CAUTION

2.22 This appliance must be earthed.

2.23 Fuses do not give personal protection against electric shock. To enhance electrical safety a 30mA residual current device (RCD) should be installed in all electric hand wash circuits. This may be part of the consumer unit, or a separate unit.

2.24 Ensure that all terminal block connections are sufficiently tight.

2.25 Switch off appliance immediately and isolate if water ceases to flow during use.

2.26 Other electrical equipment e.g. extractor fans, must not be connected to the hand wash or its supply circuit.

Table: Technical parameters in accordance with European Commission regulations 814/2013 and 812/2013
3.0 SITE REQUIREMENTS

WARNING
3.1 The hand wash must not be positioned where it will be subjected to freezing conditions.

WATER REQUIREMENTS
3.2 The installation must be in accordance with Water Regulations. To ensure activation of the heating elements, the hand wash must be connected to a mains water supply with a minimum running pressure of 0.1 MPa (1 bar) and a maximum static pressure of 0.7 MPa (7 bar). If static pressure exceeds 0.7MPa (7bar) fit a pressure reducing valve to avoid damaging the appliance. If in doubt, the pressure should be checked taking account of other services from the same water supply which could cause the pressure to fall below the minimum. The water supply can also be taken from a cold water storage cistern provided there is a minimum head of 10m above the appliance.
3.3 If the hand wash is operated outside of the stated pressure parameters, it may not be possible to achieve optimum performance from the appliance throughout the year.

ELECTRICAL REQUIREMENTS

WARNING

![Wiring diagram](image)

3.1kW

Figure 2 Wiring diagram
3.4 The appliance must be earthed  
**IMPORTANT - INSTALLATION TO BE DONE BY A COMPETENT INSTALLER**

3.5 The installation supply cable and circuit protection must conform to BS 7671.

3.6 Before making any sort of electrical connection, ensure that no terminal within the circuit is live. If in any doubt SWITCH OFF the whole installation at the consumer unit.

3.7 The hand wash must only be connected to a 230-240V ac supply.

3.8 The earthing and protective conductor arrangement within the property, in particular the supplementary bonding in the room containing the hand wash, must comply with BS 7671.

3.9 Ensure that the supply cable and fuse are sufficient for the rated input of your appliance. Please refer to the rating label within the appliance.

3.10 **For a 3.1kW unit:**  
A minimum heat resistant cable size of 1.5mm² should be used. The hand wash can be connected in two different ways.  
1. Via a fused and switched connection unit taken as a spur from a 13amp ring main.  
2. As a separate circuit taken directly from a spare way in a consumer unit.

In each case a double pole isolating switch having a contact separation of at least 3mm in each pole, and a minimum rating of 13amp must be incorporated in the wiring of the appliance.

---

**Figure 3 Schematic of typical electrical layout**
3.11 To obtain full advantage of the power provided by the hand wash, use the shortest cable route possible from the consumer unit to the hand wash.

3.12 If your consumer unit has a rating below 80A or, if there is no spare fuse way, then the installation will not be straightforward and may require a new consumer unit. A qualified electrician should install the new consumer unit. It may be necessary to contact your electrical supplier to upgrade your supply.

**CAUTION**

3.13 To enhance electrical safety a 30mA residual current device (RCD) should be installed in all electric hand wash circuits. This may be part of the consumer unit or a separate unit. **DO NOT** use a rewirable fuse, instead use a suitably rated miniature circuit breaker (MCB) or cartridge fuse. The hand wash must be connected to its own independent electrical circuit.
4.0 CONSIDERATIONS BEFORE FITTING

IMPORTANT - INSTALLATION TO BE CARRIED OUT BY A COMPETENT INSTALLER

4.1 The appliance must be mounted on a flat surface, which covers the full width and length of the backplate. It is important that the wall surface is flat otherwise difficulty may be encountered when fitting the cover.

4.2 Ensure that the hand wash is positioned over the basin, because if the PRD operates water will eject from the bottom of the appliance.

4.3 The outlet of the hand wash acts as a vent and MUST NOT be connected to any form of outlet flow control, or any other fitting not recommended by Santon.

4.4 DO NOT fit the hand wash to the wall and tile up to the case. It must be fitted on to a finished flat and even wall surface. This allows removal for servicing.

4.5 The control knob is an integral part of the cover - do not attempt to remove it.

4.6 Position the unit above the basin so that the spray will be contained within the basin and at a convenient height for hand washing see Figure 4 opposite.

4.7 A clearance of at least 130mm above and below the unit should be allowed for access to the cover screws.

4.8 Cable entry can be from the rear (preferred) or from the bottom. The backplate has cut-out position to suit size of cable. When opting for bottom entry make the cut-out to suit the cable before fitting the backplate to the wall - see Figure 5 below.
PIPE ENTRY

4.9 Plumbing entry can be from the rear (preferred) or from the bottom. The backplate has a cut out position to suit 15mm pipe. When opting for bottom entry make cut out before fitting backplate to the wall - see Figure 6 below.

![Figure 6 Plumbing cut-out](image)

5.0 FITTING INSTRUCTIONS

5.1 TURN OFF water and electrical supply.
5.2 The appliance is designed for bottom and rear entries of water and electric cable. It is advisable to use the rear entry (when it is possible), in order to obtain a neater installation.
5.3 Unscrew the retaining screws and lift the cover from the back plate - see Figure 7 below.

![Figure 7 Removing Cover](image)

5.4 Fit the outlet spout - DO NOT over tighten, finger tight will be sufficient - see Figure 8 above.
5.5 After choosing the correct site for the hand wash, use the backplate as a template and mark the two fixing holes - see 4.1 to 4.7 p9. BEWARE OF CABLES AND PIPES WHICH MAY BE BURIED IN THE WALL.
5.6 Drill holes using a 6.5mm diameter masonry drill.
5.7 Use plugs to suit the wall and use the fixing screws supplied.
PIPE CONNECTION

5.8 The hand wash has been designed for a 15mm water pipe using the pushfit connection - see Fig. 11, p12.

5.9 Decide where to connect the cold water mains feed to the hand wash. Ensure that the pipe you have selected is not a gas pipe or a hot water pipe. Chrome and stainless steel pipe is not recommended.

Figure 9 Unit layout - Dimensions (mm)
5.10 An isolating stopvalve MUST be incorporated to the main water supply to comply with Water Regulations - see Fig. 4 p9.

5.11 Cut all necessary pipework to length with a pipe cutter and not a hacksaw. This will minimise the swarf and prevent damage to the sealing o-ring in the pushfit fitting - see Figure 10 below.

5.12 Assemble the installation before making any soldered joints to ensure that the pipe is the correct length. DO NOT use jointing compounds on any pipe fittings for the installation.

5.13 Remove the unit before soldering the connections.

5.14 It is essential to flush the pipe in order to clear debris, particles of solder and swarf - see Figure 12 opposite.

5.15 Turn the water off after flushing using the isolating stop valve.

5.16 Connect the cold water supply pipe to the inlet of the hand wash, this is a push fit - see Figure 11 above.

5.17 Fit top and bottom screws and secure the backplate to the wall ensuring that it is level.

5.18 Close the hand wash flow control valve by turning the gear fully anti-clockwise.

5.19 Turn the isolating stop valve on slowly and check for leaks in all pipework, rectify as necessary.

5.20 Turn off the isolating stop valve.
6.0 ELECTRICAL CONNECTIONS

WARNING
6.1 This appliance must be earthed.

CAUTION
6.2 When working on electrical components ensure they are NOT LIVE. If in any doubt, SWITCH OFF THE ELECTRICITY SUPPLY.

6.3 A double-pole isolating switch having a contact separation of 3mm in each pole MUST be incorporated to the circuit - see Figure 3 p7.

6.4 The cable entry should have been decided before fitting the backplate - see 4.8 p9.

6.5 Remove the screws and clamping bar from the cable clamp - see Figure 14 below.

6.6 Feed the cable in the backplate (unscrew backplate for easy feeding if necessary).

6.7 Strip the outer sheath of the cable to a point about 5mm above the clamp, thus ensuring that the cable is clamped across its outer sheath.

6.8 Strip the insulation from the cores and make connections - see Figure 14 below.

Figure 14 Electrical connection

6.9 Make sure that all the terminal block screws are sufficiently tight.

6.10 Refit the clamp bar.

FITTING COVER
6.11 Fit outlet spout if required - see 5.4.

6.12 Place the cover onto the backplate.

6.13 Secure the cover to backplate using screws provided.
7.0 COMMISSIONING

NOTE: The first operation of the hand wash is intended to ensure the heater unit contains water before the appliance is switched on.

7.1 Before turning on the electricity and mains water to the hand wash, ensure the torx adjusting screw is turned fully anti-clockwise - see figure 15 below.

7.2 Turn on the main water supply at the isolating stop valve.

7.3 Place hand in front of appliance sensor to activate solenoid.

7.4 When water flows constantly from spout turn torx adjusting screw to an acceptable level of flow, (You may have to place your hand in front of sensor to keep water flowing) adjust further for acceptable heat.

7.5 Leave torx adjusting key with customer.

Figure 15 Adjusting screw
8.0 FAULT FINDING

8.1 In the unlikely event of a problem, consult the trouble-shooting chart below.

8.2 If you are unable to remedy the problem, CONTACT YOUR INSTALLER in the first instance.

IMPORTANT

8.3 Do not attempt any electrical or plumbing work unless you are competent to do so.

8.4 If you still cannot solve the problem, please contact Santon.

8.5 It is advisable that, in the interests of safety, the handwash and its electrical installation is checked by a competent electrician, at least every two years.

9.0 MAINTENANCE

9.1 It is recommended that the hand wash casing be cleaned using a soft cloth and that the use of abrasive or solvent cleaning fluids be avoided. It is advisable that before cleaning, the isolating switch is turned off, thus avoiding accidental operation of the hand wash.

IMPORTANT

9.2 IT IS MOST IMPORTANT TO KEEP THE SPRAY PLATE CLEAN IN ORDER TO MAINTAIN THE PERFORMANCE OF THE HAND WASH. The hardness of the water will determine the frequency of cleaning.

![Figure 16 Cleaning sprayplate](image)

To remove sprayplate unscrew anticlockwise using a coin.

Ensure all holes in sprayplate are clear.

It is recommended to soak the sprayplate overnight in suitable descaler.

DO NOT OVERTIGHTEN when refitting sprayplate.
10.0 SPARE PARTS

10.1 The following comprehensive list of spare parts is available for your Santon handwash. Please refer to the rating label on the side of your heater before ordering to ensure the correct spare part is obtained.

DO NOT REPLACE WITH PARTS NOT RECOMMENDED BY SANTON AS THIS WILL INVALIDATE YOUR GUARANTEE AND MAY RENDER THE INSTALLATION DANGEROUS.

Figure 17 Exploded diagram
This product is guaranteed against faulty materials and manufacture for a period of two years from the date of purchase provided that:

1. The unit has been installed by a competent person in accordance with the installation, User Instructions, all relevant Codes of Practice, Regulations in force at the time of Installation and that all necessary controls and safety valves have been fitted correctly.
2. Any valves and controls are of the Santon recommended type and specification.
3. The appliance has not been modified or tampered with in any way and has been regularly maintained as detailed in the Installation and User Instructions.
4. The appliance has been used only for heating potable water.

The appliance is not guaranteed against damage by frost, and the inner container with integral heating element is not guaranteed against excessive scale build-up.

This guarantee in no way affects the statutory rights of the consumer.

The policy of Santon is one of continuous product development and, as such, we reserve the right to change specifications without notice.

**Environmental Information**
Santon products are manufactured from many recyclable materials. At the end of their useful life they should be disposed of at a Local Authority Recycling Centre in order to realise the full environmental benefits.
